Chapter 1

MolSim2024 - Group D

1.1 Prerequisites

Developed and tested with these versions, other versions might work

- clang 17.0.6
- lldb 17.0.6
- cmake 3.27.7
- ninja 1.11.1

These environment variables are assumed to be always set. They are used to select which environment should be build. There purpose is simplifying the documentation only.

```
RELEASE_BUILD_DIR=build-release  
DEBUG_BUILD_DIR=build-debug
```

```
BUILD_DIR=RELEASE_BUILD_DIR # or DEBUG_BUILD_DIR if debugging
```

Run this in the root folder of this repository

```
/usr/bin/cmake -DCMAKE_BUILD_TYPE=Release \  
-DCMAKE_MAKE_PROGRAM=/usr/bin/ninja \  
-DCMAKE_CXX_COMPILER=/usr/bin/clang++ \  
-DCMAKE_EXPORT_COMPILE_COMMANDS=ON \  
-G Ninja \  
-S $(pwd) \  
-B $(pwd) /${BUILD_DIR}
```

‘-G 'Unix Makefile'` would generate make files if required

1.2 Building documentation

```
cd ${BUILD_DIR}  
ninja doc_doxygen
```

1.3 Build and run

```
cd ${BUILD_DIR}  
ninja  
./MolSim
```

1.4 Clean

```
cd ${BUILD_DIR}
ninja clean
```

1.5 Static analysis

```
clang-tidy $files...$ -checks="cppcoreguidelines-*,modernize-*,performance-*,readability-*" -p
./${BUILD_DIR}/compile_commands.json
```

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

FileReader	7
Particle	8

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

src/ FileReader.cpp	11
src/ FileReader.h	11
src/ MolSim.cpp	12
src/ Particle.cpp	14
src/ Particle.h	14

Chapter 4

Class Documentation

4.1 FileReader Class Reference

```
#include <FileReader.h>
```

Public Member Functions

- [FileReader](#) ()
- virtual [~FileReader](#) ()
- void [readFile](#) (std::vector< [Particle](#) > &[particles](#), char *filename)

4.1.1 Constructor & Destructor Documentation

4.1.1.1 FileReader()

```
FileReader::FileReader ( ) [default]
```

4.1.1.2 ~FileReader()

```
FileReader::~~FileReader ( ) [virtual], [default]
```

4.1.2 Member Function Documentation

4.1.2.1 readFile()

```
void FileReader::readFile (
    std::vector< Particle > & particles,
    char * filename )
```

The documentation for this class was generated from the following files:

- [src/FileReader.h](#)
- [src/FileReader.cpp](#)

4.2 Particle Struct Reference

```
#include <Particle.h>
```

Public Member Functions

- [Particle](#) (int [type](#)=0)
- [Particle](#) (const [Particle](#) &other)
- [Particle](#) (std::array< double, 3 > x_arg, std::array< double, 3 > v_arg, double m_arg, int [type](#)=0)
- [~Particle](#) ()
- bool [operator==](#) ([Particle](#) &other) const
- std::string [toString](#) () const

Public Attributes

- std::array< double, 3 > [x](#) {}
Position of the particle.
- std::array< double, 3 > [v](#) {}
Velocity of the particle.
- std::array< double, 3 > [f](#) {}
Force effective on this particle.
- std::array< double, 3 > [old_f](#) {}
Force which was effective on this particle.
- double [m](#) {}
Mass of this particle.
- int [type](#)
Type of the particle.

4.2.1 Constructor & Destructor Documentation

4.2.1.1 Particle() [1/3]

```
Particle::Particle (
    int type = 0 ) [explicit]
```

4.2.1.2 Particle() [2/3]

```
Particle::Particle (
    const Particle & other )
```

4.2.1.3 Particle() [3/3]

```
Particle::Particle (
    std::array< double, 3 > x_arg,
    std::array< double, 3 > v_arg,
    double m_arg,
    int type = 0 )
```

4.2.1.4 ~Particle()

```
Particle::~~Particle ( )
```

4.2.2 Member Function Documentation

4.2.2.1 operator==()

```
bool Particle::operator== (
    Particle & other ) const
```

4.2.2.2 toString()

```
std::string Particle::toString ( ) const
```

4.2.3 Member Data Documentation

4.2.3.1 f

```
std::array<double, 3> Particle::f {}
```

Force effective on this particle.

4.2.3.2 m

```
double Particle::m {}
```

Mass of this particle.

4.2.3.3 old_f

```
std::array<double, 3> Particle::old_f {}
```

Force which was effective on this particle.

4.2.3.4 type

```
int Particle::type
```

Type of the particle.

Use it for whatever you want (e.g. to separate molecules belonging to different bodies, matters, and so on)

4.2.3.5 v

```
std::array<double, 3> Particle::v {}
```

Velocity of the particle.

4.2.3.6 x

```
std::array<double, 3> Particle::x {}
```

Position of the particle.

The documentation for this struct was generated from the following files:

- [src/Particle.h](#)
- [src/Particle.cpp](#)

Chapter 5

File Documentation

5.1 README.md File Reference

5.2 src/FileReader.cpp File Reference

```
#include "FileReader.h"
#include <cstdlib>
#include <fstream>
#include <iostream>
#include <sstream>
```

5.3 src/FileReader.h File Reference

```
#include "Particle.h"
#include <vector>
```

Classes

- class [FileReader](#)

5.4 FileReader.h

[Go to the documentation of this file.](#)

```
00001 /*
00002  * FileReader.h
00003  *
00004  * Created on: 23.02.2010
00005  * Author: eckhardw
00006  */
00007
00008 #pragma once
00009
00010 #include "Particle.h"
00011
00012 #include <vector>
00013
00014 class FileReader {
00015
00016 public:
00017     FileReader();
00018     virtual ~FileReader();
00019
00020     void readFile(std::vector<Particle> &particles, char *filename);
00021 };
```

5.5 src/MolSim.cpp File Reference

```
#include "FileReader.h"
#include "outputWriter/VTKWriter.h"
#include "outputWriter/XYZWriter.h"
#include "utils/ArrayUtils.h"
#include <iostream>
```

Functions

- void `calculateF` ()
calculates the force for all particles
- void `calculateX` ()
calculates the position for all particles
- void `calculateV` ()
calculates the position for all particles
- void `plotParticles` (int iteration)
plotting function that takes an integer value and has no return value
- int `main` (int argc, char *argv[])
main function for execution

Variables

- constexpr double `start_time` = 0
initialisation of the start time of the simulation with 0
- constexpr double `end_time` = 1000
initialisation of the end time of the simulation with 1000 according to the worksheet task 4.1
- constexpr double `delta_t` = 0.014
time delta of 0.014 according to the worksheet task 4.1
- std::vector< `Particle` > `particles`

5.5.1 Function Documentation

5.5.1.1 `calculateF()`

```
void calculateF ( )
```

calculates the force for all particles

5.5.1.2 `calculateV()`

```
void calculateV ( )
```

calculates the position for all particles

5.5.1.3 calculateX()

```
void calculateX ( )
```

calculates the position for all particles

5.5.1.4 main()

```
int main (
    int argc,
    char * argv[] )
```

main function for execution

Parameters

<i>argc</i>	an integer argument, standard for main function
<i>argv</i>	a char array argument, standard for main function

Returns

the return code

5.5.1.5 plotParticles()

```
void plotParticles (
    int iteration )
```

plotting function that takes an integer value and has no return value

Parameters

<i>iteration</i>	an integer argument that sets the number of iterations
------------------	--

5.5.2 Variable Documentation

5.5.2.1 delta_t

```
constexpr double delta_t = 0.014 [constexpr]
```

time delta of 0.014 according to the worksheet task 4.1

5.5.2.2 end_time

```
constexpr double end_time = 1000 [constexpr]
```

initialisation of the end time of the simulation with 1000 according to the worksheet task 4.1

5.5.2.3 particles

```
std::vector<Particle> particles
```

5.5.2.4 start_time

```
constexpr double start_time = 0 [constexpr]
```

initialisation of the start time of the simulation with 0

5.6 src/Particle.cpp File Reference

```
#include "Particle.h"  
#include "utils/ArrayUtils.h"  
#include <iostream>
```

Functions

- std::ostream & [operator<<](#) (std::ostream &stream, [Particle](#) &p)

5.6.1 Function Documentation

5.6.1.1 operator<<()

```
std::ostream & operator<< (  
    std::ostream & stream,  
    Particle & p )
```

5.7 src/Particle.h File Reference

```
#include <array>  
#include <string>
```

Classes

- struct [Particle](#)

Functions

- std::ostream & [operator<<](#) (std::ostream &stream, [Particle](#) &p)

5.7.1 Function Documentation

5.7.1.1 operator<<()

```
std::ostream & operator<< (
    std::ostream & stream,
    Particle & p )
```

5.8 Particle.h

[Go to the documentation of this file.](#)

```
00001 /*
